

Anti-Virus Software LiveUpdate Instruction Sheet: Windows Users

1. Right-click on the 'Symantec AntiVirus Corporate Edition' icon on the task bar in the lower right hand corner of your desktop and select: "Open Symantec Antivirus..." (The icon will look like a little golden yellow shield.)
2. Push the button on the Symantec AntiVirus window labeled "LiveUpdate" to get the latest updates for your computer. A new, smaller window will open up. Press the "Next" button to continue.

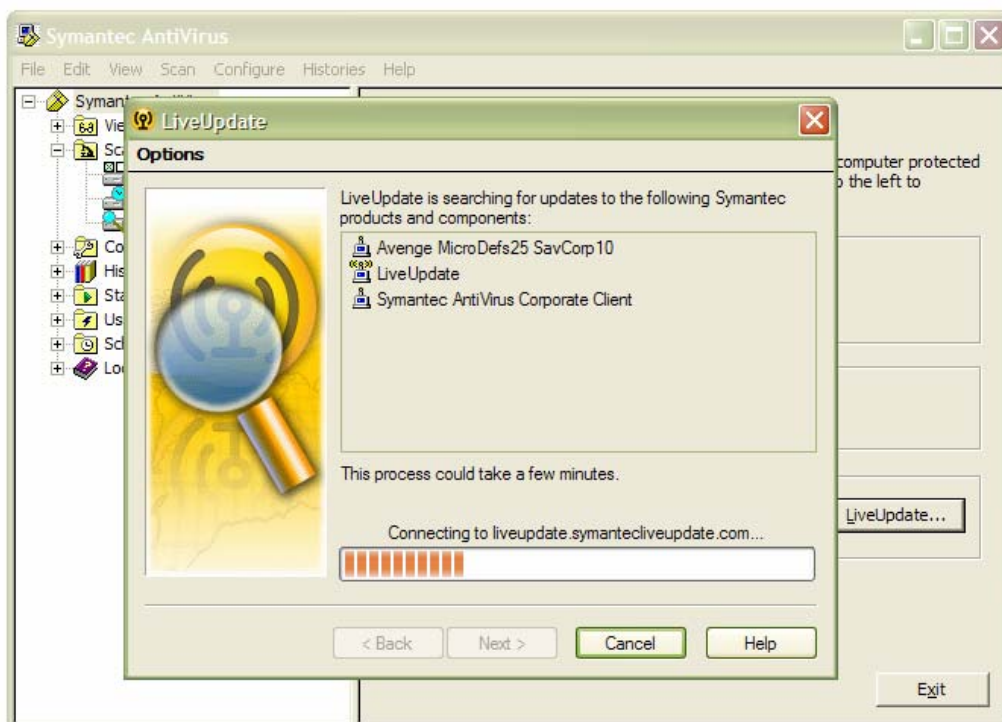

3. A new window will open, like the one below. Click the “Next” button to begin the LiveUpdate process.

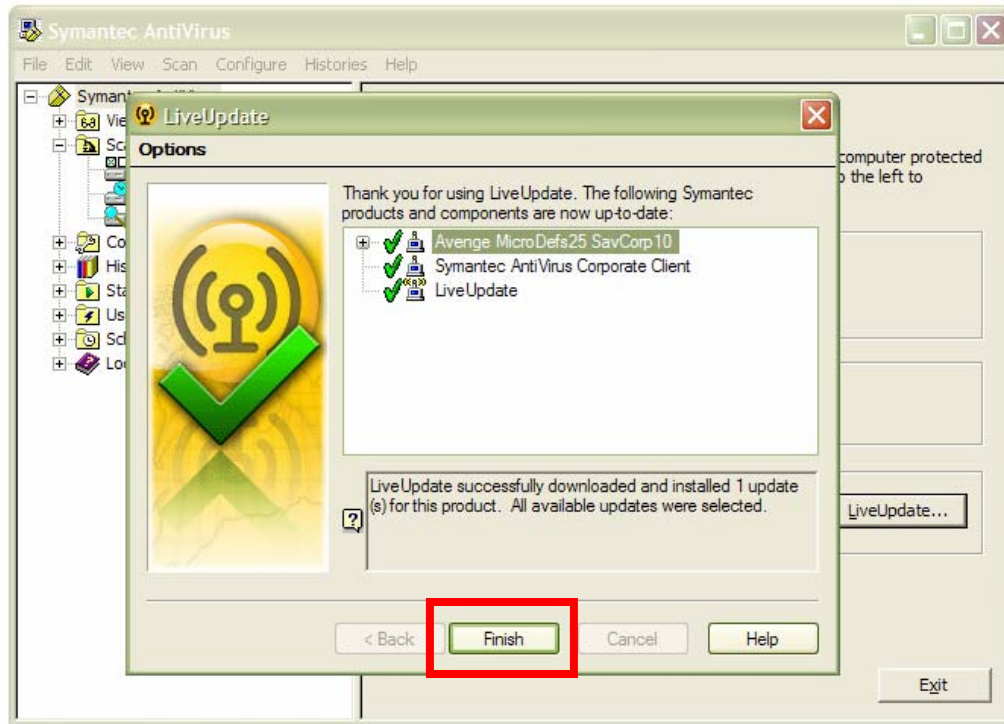

Remember, you must be connected to the Internet to make this feature work.

4. Two steps will automatically occur. One to check your current files and the other to download any new needed files. Both of these screens look similar to the one below.

5. The next step shows the outcome of the checks and the download. If you have any RED "X"s in this screen, re-run the LiveUpdate tool. If no updates are needed, the system will tell you that. Click "Finish" to trigger the installation routine if updates were needed.

6. The final step will be the installation of the new definitions. This box will pop-up while that occurs:

7. Verify that the date next to the LiveUpdate button on the main screen has changed from what it used to be (to something more current). This may take a minute. If it doesn't update after a minute or two, re-run LiveUpdate.
8. Run a scan of your computer with the newly installed definitions to make sure there are no new viruses or worms on your PC.
9. You have now successfully installed Symantec AntiVirus and the latest updates. Remember to check for updates once a week using the LiveUpdate button.
